

Accura™ Precision Cantilever Hardware

Accura Roller

“Competing” Roller

Shown Actual Size

© Larsen Innovations LLC 2009

Accura is the best value in a premium performance roller. Sure we could make a cheaper roller, but frankly there are already plenty on the market. When it comes to large gates, or expensive gate operator systems, minimizing drag on the gate is critical and compromising on the rollers to save a few dollars simply defies logic to us.

Accura delivers quality you can trust... at a price that makes sense!

- **Size Matters** – Accura’s full 7” diameter roller requires more than 30% more material! (There is a reason that you don’t find 13” tires on a semi-truck.)
- **Finish Matters** – turning the roller to remove the mold seams and other imperfections is important for smooth operation.
- **Material Density Is Critical** – protects against flat spots developing in the roller, especially when gates that are not operated frequently. UV protection is also a must.
- **Easy Alignment** – when things are easy...they get done. Our adjustable axle makes alignment simple and our included roller guards help maintain alignment avoiding callbacks.
- **4000# Rating** – reaction load rated. In testing the cast bracket has been shown to be first point of failure on other premium performance rollers. Accura’s steel bracket and ½” thick axle housing is gusseted on the bottom and both sides.
- **Warrantv** – 5 year limited warrantv. (See certificate for details.)

Better Rollers – Best Value!
