

SAFETY AND SECURITY GO HAND IN HAND

SecurityWorks can help you maintain the highest level of safety for employees and visitors to your commercial / industrial facility. Our *Site Evaluation*, *Preventative Maintenance* and *Product Assurance Plan* work to eliminate accidents and reduce your exposure to legal problems down the road.

FREE SITE EVALUATION

The first step of the process is a complimentary site evaluation. We walk with you through your facility and pay special attention to existing gates, fences and access controls. The goal is to identify shortcomings in your existing setup that could lead to major problems down the road.

PREVENTATIVE MAINTENANCE

SecurityWorks then suggests upgrades that bring your facility up to the intent of **UL325**, a safety standard for electric operators for doors, gates and other opening and closing appliances. These jobs typically include the installation or upgrade of the following components:

Roller Covers

**Industrial
Photo Beam**

**Residential
Photo Beam**

Safety Edge

PRODUCT ASSURANCE PLAN

Once the initial site evaluation is complete and upgrades are in place, we'll work with you to develop a real plan to keep your facility safe and secure. Highlights include:

- **Scheduled Preventative Maintenance**
- **24/7 Emergency Service**
- **Retained Premium Services**

Our goal is to keep your facility fully operational and compliant with UL325 safety standards.
